

Water Metering Made Easy

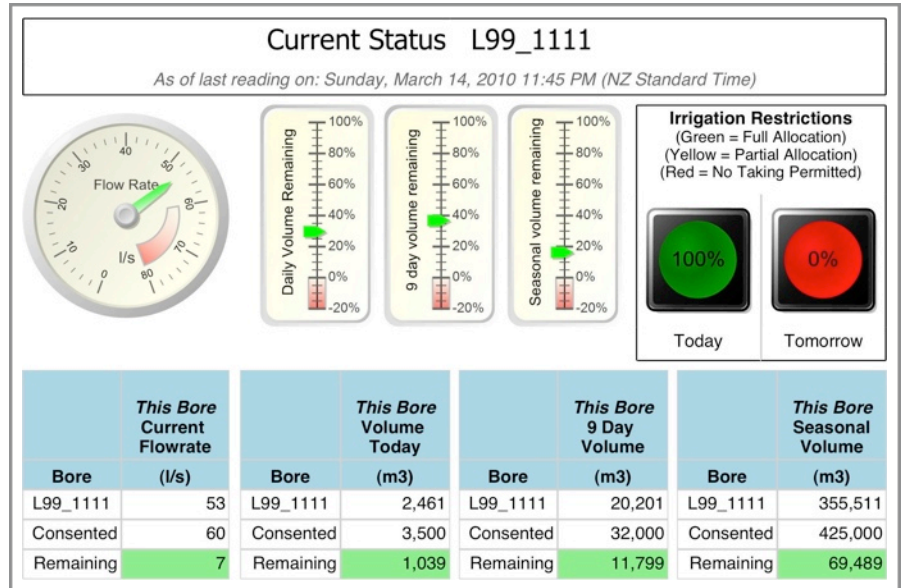

Aqualinc is an ECan approved installer and supplier of data logger and telemetry equipment and an authorized data service provider.

We provide the advice, equipment, and service to help you more effectively manage water use and meet resource consent conditions.

Our HydroTel™ system is the same chosen by most regional councils for their own monitoring networks because it is robust, secure, and scaleable. This is a time tested and field proven system that will protect your data and automate your consent compliance reporting.

We can install data loggers and telemetry equipment ourselves or work with your irrigation company to provide telemetry, data hosting, and compliance reporting to their installations.

Our core business is water management and our goal is to help you make the most of your consented allocation.

Our System Provides the Data You Need to Manage Water Takes

Simply knowing the flowrate and daily volume from an individual water take is often not enough to ensure consent compliance.

Many consents stipulate shared volume or flowrate among multiple bores, or running weekly totals.

We calculate all these for you and show where you stand with compliance.

- Secure 24/7 on-line access.
- Automated compliance reporting.
- Posted monthly reports.
- Text and email alarms.
- Up to date river take restrictions.
- Adaptive management calculations.
- Soil moisture and climate monitoring.
